SUPPORT BEYOND MEDICAL CARE

First Steps by Camarena Kids is here for more than just medical advice. If you're facing challenges with living conditions or nutrition, speak with us. We can connect you with helpful programs like WIC and SNAP and guide you in establishing new family routines that include restful breaks for you and support from loved ones.

CARING FOR YOUR BABY'S NEEDS

Engage with your baby through singing, reading, and soothing techniques.

Record your baby's temperature accurately and keep important contacts handy.

Protect your baby by ensuring proper hygiene, limited exposure to crowds, and safe sun practices.

NOURISHING YOUR NEWBORN

For breastfeeding mothers, Vitamin D drops and lactation support are available.

If formula feeding, adjust quantities to your baby's hunger, starting with 2 oz every 2-3 hours.

Recognize hunger cues and fullness signals to ensure your baby is well-fed and content.

Breast milk or iron-fortified formula is the cornerstone of nutrition until 4-6 months old.

ENSURING YOUR BABY'S SAFETY

Always use a rear-facing car seat and avoid leaving your baby alone in the vehicle.

Adhere to safe sleep practices and crib safety standards. Remember the **ABC's of safe infant sleep**: Alone, on their Back, in a Crib.

Understand when swaddling is appropriate and prevent accidental scalds or burns.

Recognizing When to Seek Help

Be vigilant for any signs of distress or illness, such as unusual breathing, fever, or changes in feeding behavior, and reach out to your pediatrician promptly.
